
v4mail

Release 0.1

vkv-onfire

Nov 08, 2021

CONTENTS

1	Home	3
2	installation	5
3	while using html	7
4	while using plane text	9
5	using otp feature on v4mail	11

python package for sending html and non html emails

simplified python package for sending custom html and non html Gmail's
OTP feature added to send email with OTP

a simplified lightweight library on python for sending custom html Gmail's

requires only `python3` (programming language) and `pip` (for installing v4mail) use navigation bar or bottom navigation to change screen

created by vkv-onfire for sending custom html Gmail's

We are on github and pypi visit our repositories at [github](#) and packages at [pypi](#)

INSTALLATION

use pip for installing v4mail

```
$ pip install v4mail
```

We had uploaded our package to pypi only
python3 and pip are only needed

WHILE USING HTML

```
import v4mail

gmail=v4mail.html('your email here', 'your password here')

gmail.add('your subject', 'content html')

gmail.sendto('recipient email')

gmail.send()
```

if you face errors see the error handling at the navigation bar for preventing it

use send() to send mail

uses Gmail service to send mails

WHILE USING PLANE TEXT

in plane text you can't use html, all types are separate

```
import v4mail  
  
gmail=v4mail.text('your email here', 'your password here')  
  
gmail.add('your subject', 'content text')  
  
gmail.send('recipient email')
```

user only registered Gmail and password else it will show error

if you face any errors at error handling at navigation bar

uses Gmail service to send mails

USING OTP FEATURE ON V4MAIL
